

## *Dedeckera eurekensis* Rev. & J. Howell

**Common Name:** July Gold

**Family:** Polygonaceae (Buckwheat Family)

**Federal, State, & CNPS status:** FSC, CR, 1B

**Diagnostic Characters:** A shrub growing to 2 m (6.6 feet) tall, with narrow leaves and stems covered by minute hairs. Small (2-4 mm [0.1-0.2 inches]), yellowish flowers with 6 lobes and 9 stamens. Flowers from June to August.

**Global Distribution:** Death Valley National Park, Inyo Mtns., and the White Mtns., California.

**DEVA Distribution:** Last Chance Range and Cottonwood Mtns.

**Habitat:** Mojavean desert scrub on limestone outcrops, 1220-2200 m (4000-7200 ft.) elevation.

**DEVA Look-alikes:** Has an overall appearance of rabbitbrush or matchweed, but July Gold has easily recognizable individual flowers.
